                                                                                                                                                                                                                                                                                 Sequence 4, Application US/10094989
Patent No. US20020115179A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN PHOSPHODIESTERASE
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUM
TITLE OF INVENTION: PROSPHODIESTERASE PROTEINS, AND USES THEREOF
FILE REPERENCE: CLOOLOGABIV
CURRENT APPLICATION NUMBER: US/10/094,989
CURRENT FILING DATE: 2002-03-12
PRIOR APPLICATION NUMBER: 09/754,250
PRIOR FILING DATE: 2001-01-05

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to h
score greater than or equal to the score of the result bein
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (SIDS2/gcgdata/geneseq/geneseqp_embl/AA198B_DAT:*

                                           human and rat type 11 phosphodiesterases (PDE11). These are useful for studying intracellular signal transduction mechanisms, in screening highly selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes the protein and coding sequences of the human cyclic nucleotide phosphodiesterase PDEXT. This enzyme is capable of catalysing the degradation of cyclic nucleotides. The sequences are useful in the treatment of cardiovascular, gastrointestinal, spleen, corpus cavernosum, kidney, liver, skeletal muscle, testis and prostate related disorders, and in the enhancement of the male erectile response and the treatment of female sexual dysfunction. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human cyclic nucleotide phosphodiesterase and its nucleotide sequence useful for treating cardiovascular disorders, sexual dysfunction and screening for drugs to treat associated disorders -

These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present

                                                                                                                                                                               The present invention provides the protein and coding sequences of novel human and rat type 11 phosphodiesterases (PDE11). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                   KDRRFNDEIDKLTGYKTKSLLCMPIRSSDGEIIGVAQAINKIPEGAPFTEDDEKVMQMYL

These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KDRRFNDEIDKLTGYKTKSLLCMPIRSSDGEIIGVAQAINKIPEGAPFTEDDEKVMQMYL

                                                                                                                                            New human cyclic nucleotide phosphodiesterases, referred as HSPDE100 and HSPDE10A2, useful for treating and preventing cancer and immune
                                                                                                                                                                                                            The present sequence is that of HSPDE10A1, a novel human cyclic nucleotide phosphodiesterase. The amino acid sequence was deduced from an isolated CDNA clone (see AAA49972). The catalytic domain shares 50% identity with HSPDESA1. The invention provides expression vectors, host cells, antibodies, agonists and antaquoists, as well as methods for diagnosing, treating or preventing disorders associated with expression of HSPDE10A1, especially cancer and immune disorders.
                                                                                                                                                                                                                                                                                                                                                           0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of HSPDE10A2, a novel human cyclic nucleotide phosphodiesterase. The amino acid sequence was deduced from an isolated cDNA clone (see AAA49973). HSPDE10A2 is a cereminal splice variant of HSPDE10A1 (see AAV55521), being identical between amino acid residues 1-338, but different in the cereminal portion from residue 339 to 367. It shares 40% identity with HSPDE5A1. The invention provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for diagnosing, treating or preventing disorders associated disorders.
                                                                                                                                                                        YQALVKVNVKLKPMLDSVATNRSKWEELHQKRLLASTASSSSPASVMVAKEDRN

```

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000~\rm or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB7737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

The invention relates to an isolated transketolase-like enzyme be polypeptide. The activity of the polypeptide of the invention may be described as cytostatic and antianaemic. Polypeptides and polynucleotides of the invention can be used to identify agents that modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LCRWLLTVRKNYRMVLYHNWRHAFNVCQLMFAMLTTAGFQDILTEVEILAVIVGCLCHDL 456
                                                                                                                                                                                                                                                                                                                                                                     Novel isolated human transketolase-like enzyme polypeptide, useful for treating cancer, anaemia, end-stage renal disease and sensory neuropathy associated with uraemia .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   transkelotase-like enzyme encoding sequence. Fusion proteins including the polypeptide of the invention may be useful in the generation of manibodies and in various assay systems. The current sequence represents the D. melanogaster CG10231 gene product that was used to aid the identification of human transkelotase-like enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               activity of a transketolase-like enzyme. They are also useful for treating transketolase-like enzyme disorder such as cancer, anaemia, end-stage renal disease and sensory neuropathy associated with uraemia. Therapeutic agents of the invention are useful for modulating the activity of transketolase-like enzyme in the above mentioned diseases. Polypeptides and polynucleotides os the invention are useful for identifying test compounds which act as agonists or antagonists, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |||:||:|| ||:: : : ||||| |:||||||:: | : :

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The specification describes a method for modulating the specific effectiveness of I-kappaB kinases or cyclic nucleotide phosphodiesterases which have the ability to cleave cyclic AMP and/or GMP. This involves modulating the specific effectiveness of the cyclic nucleotide phosphodiesterase or I-kappaB kinase by modulating the spatial distribution within cells of the animal. If the cyclic nucleotide phosphodiesterase used is a PDE3, PDE3, PDE8 or a splice variant of PDE4 (such as PDE4D), the method is used to treat inflammatory diseases such as achonic inflammation (especially airway diseases such as achonic bronchial hyper-reactivity of non-asthma etiology, both disorders such as rheumatoid arthritis and pelvospondylitis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 phosphodiesterase inhibitors comprising tricyclic compounds or theisalts. The inhibitors are useful for the treatment and prevention exectile failure and feminine function failure. The compounds have excellent CGMP-phosphodiesterase inhibitory action. The present sequence represents human CGMP phosphodiesterase inhibitory action. The present an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 934;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 934;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Indels
                                                                                                                                                    GENERAL INFORMATION:
APPLICANT: Ramakrishnan, Shyam
TITLE OF INVENTION: Regulation of Human
TITLE OF INVENTION: Phosphodiesterase-Like Enzyme
FILE REFERENCE: 02973.00511
